Dear Recruitment Manager,

I am writing to apply for the Risk Management Quantitative Associate Rotational Program. As a current Customer Experience Associate at TD and a Master of Management in Business Data Analytics student at the University of Windsor, I am eager to apply my mathematical and

programming background to the enterprise-wide modeling challenges in this program. Working at the branch level has given me a deep appreciation for TD's Culture of Care. In my day-to-day role, I focus on helping clients navigate their accounts and translating complex information to improve their financial literacy. I have also made it a priority to regularly connect with branch manager and MCE to better understand the broader business strategy and identify functional gaps that can be improved. This on the ground experience of translating financial concepts to a non-technical audience perfectly mirrors the program's requirement to explain complex mathematical analytics and model limitations in everyday language.

On the technical side, my background is heavily aligned with the quantitative demands of rotations like Model Development and Model Validation. For example, in my Mortgage Credit Risk Analytics project, I built an end-to-end pipeline using Freddie Mac loan data and developed a Logistic Regression model to predict default risk. I used SHAP to explain individual risk scores and created an interactive Streamlit dashboard for ongoing performance monitoring. I also engineered a Client Retention Risk pipeline using PySpark and Databricks to flag anomalous client behaviors.

Prior to obtaining my Master's degree, when I was working as a Data Analyst at Janes, I automated the data pipelines in order to get rid of the manual bottlenecks and put into use machine learning classification models that achieved 90% accuracy. Beyond the technical execution using Python, SQL, and advanced MS Excel, my primary focus was always on translating quantitative outputs into clear, actionable recommendations for cross-functional stakeholders, ensuring the data actually drove business value. I have a solid combination of technical ability, a strong interest in business matters, and a real dedication to TD's values, and I would like the chance to apply my analytical problem-solving skills to the Risk Management division.

My long-term goal is to build a career in risk management where I can help protect TD while also supporting the needs of the frontline business. I see this rotational program as a great opportunity to build on my branch experience, gain exposure to different areas of risk, and develop a broader understanding of how risk management works across TD. Ultimately, I want to use that experience to grow into a strong and well-rounded risk leader.

Thank you for taking the time to review my application. I look forward to the opportunity to discuss my application further.

Yours faithfully,

Shawaiz Akhter
