Degrees Awarded

Degree: Master of Management
Confer Date: 06/03/2026
Plan: Master of Management - Business Data Analytics

Beginning of Graduate Record

W2025

Master of Management - Business Data Analytics

<u>Course</u>		<u>Description</u>	<u>Attempted</u>	<u>Earned</u>	<u>Grade</u>
BSMM	8000	Business Communications	3.000	3.000	86
BSMM	8110	Acctg Concepts and Techniques	3.000	3.000	67
BSMM	8140	Marketing	3.000	3.000	74
BSMM	8320	Quantitative Studies	3.000	3.000	73
Term Average			<u>Attempted</u> 12.000	<u>Earned</u> 12.000	
Cumulative Average			12.000	12.000	

IS2025

Master of Management - Business Data Analytics

<u>Course</u>		<u>Description</u>	<u>Attempted</u>	<u>Earned</u>	<u>Grade</u>
BSMM	8710	Introduction to Data Analytics	3.000	3.000	84
BSMM	8720	Data Analytics & Project Mgmt	3.000	3.000	78
BSMM	8730	Data Acquisition & Management	3.000	3.000	81
Term Average			<u>Attempted</u> 9.000	<u>Earned</u> 9.000	
Cumulative Average			21.000	21.000	

F2025

Master of Management - Business Data Analytics

<u>Course</u>		<u>Description</u>	<u>Attempted</u>	<u>Earned</u>	<u>Grade</u>
BSMM	8130	Managing/Org. Effectiveness	3.000	3.000	78
BSMM	8740	Data Analytic Meth. & Algorith	3.000	3.000	85

Dear Recruitment Manager,

I am writing to apply for the Risk Management Quantitative Associate Rotational Program. As a current Customer Experience Associate at TD and a Master of Management in Business Data Analytics student at the University of Windsor, I am eager to apply my mathematical and

programming background to the enterprise-wide modeling challenges in this program. Working at the branch level has given me a deep appreciation for TD's Culture of Care. In my day-to-day role, I focus on helping clients navigate their accounts and translating complex information to improve their financial literacy. I have also made it a priority to regularly connect with branch manager and MCE to better understand the broader business strategy and identify functional gaps that can be improved. This on the ground experience of translating financial concepts to a non-technical audience perfectly mirrors the program's requirement to explain complex mathematical analytics and model limitations in everyday language.

On the technical side, my background is heavily aligned with the quantitative demands of rotations like Model Development and Model Validation. For example, in my Mortgage Credit Risk Analytics project, I built an end-to-end pipeline using Freddie Mac loan data and developed a Logistic Regression model to predict default risk. I used SHAP to explain individual risk scores and created an interactive Streamlit dashboard for ongoing performance monitoring. I also engineered a Client Retention Risk pipeline using PySpark and Databricks to flag anomalous client behaviors.

Prior to obtaining my Master's degree, when I was working as a Data Analyst at Janes, I automated the data pipelines in order to get rid of the manual bottlenecks and put into use machine learning classification models that achieved 90% accuracy. Beyond the technical execution using Python, SQL, and advanced MS Excel, my primary focus was always on translating quantitative outputs into clear, actionable recommendations for cross-functional stakeholders, ensuring the data actually drove business value. I have a solid combination of technical ability, a strong interest in business matters, and a real dedication to TD's values, and I would like the chance to apply my analytical problem-solving skills to the Risk Management division.

My long-term goal is to build a career in risk management where I can help protect TD while also supporting the needs of the frontline business. I see this rotational program as a great opportunity to build on my branch experience, gain exposure to different areas of risk, and develop a broader understanding of how risk management works across TD. Ultimately, I want to use that experience to grow into a strong and well-rounded risk leader.

Thank you for taking the time to review my application. I look forward to the opportunity to discuss my application further.

Yours faithfully,

Shawaiz Akhter

EDUCATION

University of Windsor

Jan 2025 - Apr 2026

Masters of Management in Business Data Analytics

JSS Science and Technology University

Aug 2018 - May 2022

Bachelors of Engineering

TECHNICAL SKILLS

Programming & Databases: Python, SQL, R

Data Science & Machine Learning: Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, Predictive Modeling

Statistics & Analytics: Statistical Analysis, Hypothesis Testing, A/B Testing, Exploratory Data Analysis (EDA)

Data Visualization: Matplotlib, Seaborn, Plotly, Power BI, Tableau, Excel

Cloud & Platforms: AWS, Azure, Google Cloud Platform, BigQuery, Databricks, Snowflake

Certifications: Microsoft Business Analyst Associate, Tableau Professional Business Intelligence Analyst

EXPERIENCE

TD Canada Trust

Windsor, Canada

Customer Experience Associate

Dec 2025 – Present, Part-time

- Handle client transactions and account-related requests while maintaining accuracy, confidentiality, and compliance with TD policies and procedures.
- Flagged recurring gaps in day-to-day reporting to branch leadership and proposed process adjustments to address them
- Communicate financial and account information clearly to clients with varying levels of financial literacy.

Janes

Bangalore, IN

Data Analyst

Nov 2022 – Dec 2024

- **Extracted, transformed, and analyzed** large datasets by writing SQL queries and engineering automated data pipelines with **VBA macros**, eliminating manual ETL steps to accelerate data readiness for internal analytics tools.
- Developed and refined quantitative machine learning **detection models** to analyze data and categorize dataset with 90% accuracy, effectively minimizing false positives and driving data-driven decisions.
- Conducted quantitative analysis and **A/B testing** to identify behavioral patterns and trends, synthesizing results into actionable proposals and **automated workflows** (Power Automate) that improved target conversion metrics by over 20%.
- Developed dynamic dashboards and automated reporting tools using **MySQL, Databricks, and Power BI**, providing actionable insights that enhanced program effectiveness and streamlined data access for cross-functional teams.
- Presented findings, recommendations, and project outcomes to client and internal stakeholders through comprehensive analytical reports.

PROJECTS

Client Retention Risk Pipeline | [GitHub](#)

- Engineered an end-to-end data pipeline on Databricks using PySpark to extract, transform, and analyze to flag at risk clients. Developed a classification model to risk-score and flag specific client behaviors, utilizing distributed data techniques directly applicable to anomaly and fraud detection.

Mortgage Credit Risk Analytics & Default Prediction | [GitHub](#)

- Built an end-to-end mortgage credit risk analytics pipeline using Freddie Mac loan-level data (2005–2012), developing a Logistic Regression model to predict mortgage default risk, evaluating model performance on post-crisis mortgage data. Used SHAP to explain individual risk scores and benchmarked against gradient boosting for a regulated-lending context requiring interpretability. Implementing an interactive Streamlit dashboard for ongoing performance monitoring and governance-focused decision support.
